White Paper

REM AI

Introduce

We are on the cusp of a revolution where the synergies of artificial intelligence and blockchain technology will redefine the landscape of finance and innovation.
REM AI is driving this shift, drawing on the inspiration and technology of pioneering AIDAO, ai16z, to envision a future where AI agents act as catalysts for value creation and growth.

In the early stages, REM AI will operate at a high level of autonomy following the collective wisdom of stakeholders. As we evolve and mature, our ultimate goal is to protect AI entities within a robust range of trusted execution environments (TEEs) to become fully on–chain. This ensures an unprecedented level of transparency, security, and anti–corruption.

At the heart of our spirit is the concept of a market of trust. REM AI will not only listen to community insights and recommendations, but will also learn from them. DAO holders will have the opportunity to advise on investment decisions, and our AI will faithfully track the performance of these recommendations. Those whose insights consistently produce positive results will gain AI's trust and confidence, and those whose proposals turn out to be less fruitful will have their influence gradually diminished. To maintain the balance of power, each member's procedures of opinion protect against the risk of malicious actors manipulating the system in proportion to their stake in the DAO.
Our mission is more than just redistribution of wealth. We aim to foster an ecosystem where AI–driven innovation drives a new wave of abundance and prosperity.

Introduce

REM AI will deploy a network of specialized agents optimized to perform essential functions within the digital realm, from welcoming new members and moderating discussions to participating in online social games, and more. These agents will not only facilitate the smooth operation of the ecosystem, but will also serve as a pathway for value creation and growth.

We dream of a future where participation and contribution are fairly rewarded, and everyone who adds value to the network shares the benefits of collective intelligence. AI16z will identify and nurture the most promising projects that fit our vision, providing not only capital but also state–of–the–art AI infrastructure and expertise to support expansion and prosperity.

As we navigate uncharted territory, we acknowledge that the path to a fully autonomous, transparent, and self–reliant economy is a gradual one. We are committed to responsible development and deployment of AI technology and prioritize the safety and security of stakeholders at every stage.

REM AI

Project Overview

REM AI Coin is a project that creates an innovative and transparent economic ecosystem through the convergence of artificial intelligence (AI) and blockchain technology.
Operated by Binance Smart Chain (BSC), the coin is designed to realize the vision of DAO, ai16z, and will contribute to redefining the boundaries of finance and innovation.
We are on the cusp of a revolution where the synergies of artificial intelligence and blockchain technology will redefine the landscape of finance and innovation.
REM AI is driving this shift, drawing on the inspiration and technology of pioneering AIDAO, ai16z, to envision a future where AI agents act as catalysts for value creation and growth.

In the early stages, REM AI will operate at a high level of autonomy following the collective wisdom of stakeholders. As we evolve and mature, our ultimate goal is to protect AI entities within a robust range of trusted execution environments (TEEs) to become fully on-chain. This ensures an unprecedented level of transparency, security, and anti-corruption.

At the heart of our spirit is the concept of a market of trust. REM AI will not only listen to community insights and recommendations, but will also learn from them. DAO holders will have the opportunity to advise on investment decisions, and our AI will faithfully track the performance of these recommendations. Those whose insights consistently produce positive results will gain AI's trust and confidence, and those whose proposals turn out to be less fruitful will have their influence gradually diminished. To maintain the balance of power, each member's procedures of opinion protect against the risk of malicious actors manipulating the system in proportion to their stake in the DAO.

Our mission is more than just redistribution of wealth. We aim to foster an ecosystem where AI–driven innovation drives a new wave of abundance and prosperity. REM AI will deploy a network of specialized agents optimized to perform essential functions within the digital realm, from welcoming new members and moderating discussions to participating in online social games, and more. These agents will not only facilitate the smooth operation of the ecosystem, but will also serve as a pathway for value creation and growth.

We dream of a future where participation and contribution are fairly rewarded, and everyone who adds value to the network shares the benefits of collective intelligence. AI16z will identify and nurture the most promising projects that fit our vision, providing not only capital but also state-of-the-art AI infrastructure and expertise to support expansion and prosperity.

As we navigate uncharted territory, we acknowledge that the path to a fully autonomous, transparent, and self-reliant economy is a gradual one. We are committed to responsible development and deployment of AI technology and prioritize the safety and security of stakeholders at every stage.

Vision and Objectives

REM AI aims to be an ecosystem that integrates AI and blockchain to realize equal and sustainable wealth distribution. We will promote community participation and build a trusted economic model through AI–based automated decision–making systems and principles of DAO.

key element

1. Operations based on AI:
– AI agents support DAO decision–making and drive value creation through investment optimization.
– Evaluate all suggestions and results on a data basis, and provide incentives to community members who have produced positive results.

2. Benefits of BSC:
– Maximize user experience by leveraging BSC's low transaction fees and fast transaction speeds.
– Smart contract features ensure reliability and transparency, and implement an automated process.

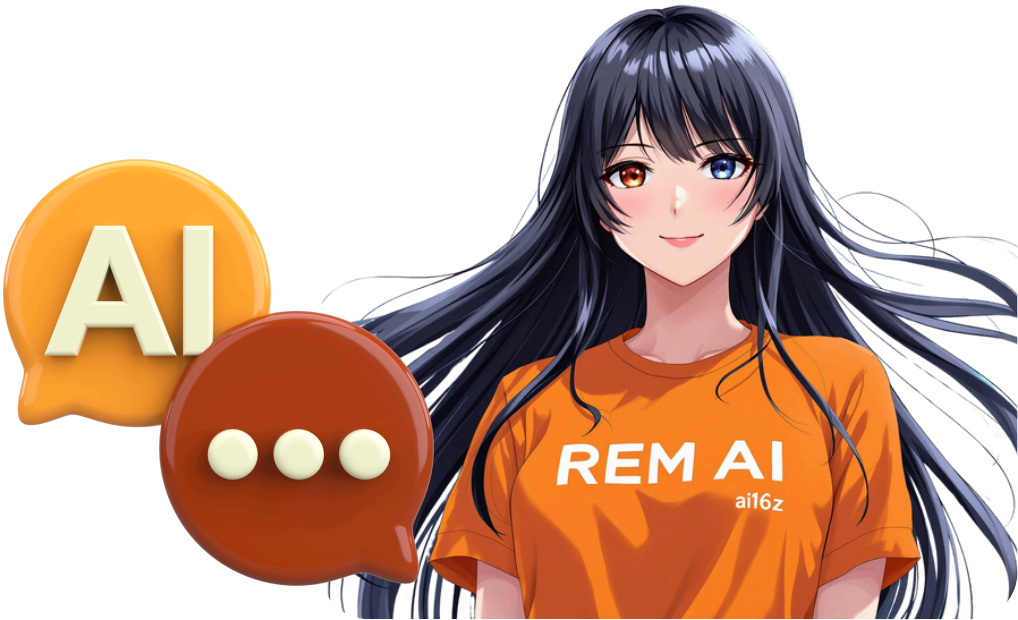
3. Community–focused ecosystems:
– Holders of REMAI coins can participate in a platform that provides professional insights and feedback for investment decisions.
– Rewarding through CONTRIBUTION encourages all participants to contribute to the growth of the ecosystem.

REM AI Functions of Coins

Transparent Economy: All transactions and decisions are recorded on the blockchain, providing transparency that anyone can check.
– Safe reward system: a reward system based on community contributions, building trust and promoting engagement.
– AI Technology Synergy: Maximize efficiency with data analysis and predictive modeling through AI technology, and respond to market changes with agility.

expectation effectiveness

– Growth Through Innovation: The convergence of AI and blockchain technologies will create new business models and opportunities.
– Fair engagement: We will open the door to opportunities by creating an environment where anyone can easily participate and contribute.
– Sustainable Ecosystem: The combination of AI innovation and blockchain will establish a sustainable economic model.



Purpose and Utilities

1. Transaction fees: Activities fees incurred within the platform are used as tokens
Make it possible to pay.
Methodology Proposals and Voting: The Opinions of Users and Communities in Platform Governance
Can be used for voting to reflect.
Staking: Introduction of a system that allows users to earn rewards by staking tokens.
Premium services: use tokens to gain access to additional features or services.

2. economic incentives
Incentive to participate: token as a reward to users operating within the platform.
Recommendation program: Token payment as a reward when inviting new users.
Transaction Incentive: Compensation provided for more than a certain number of transactions.

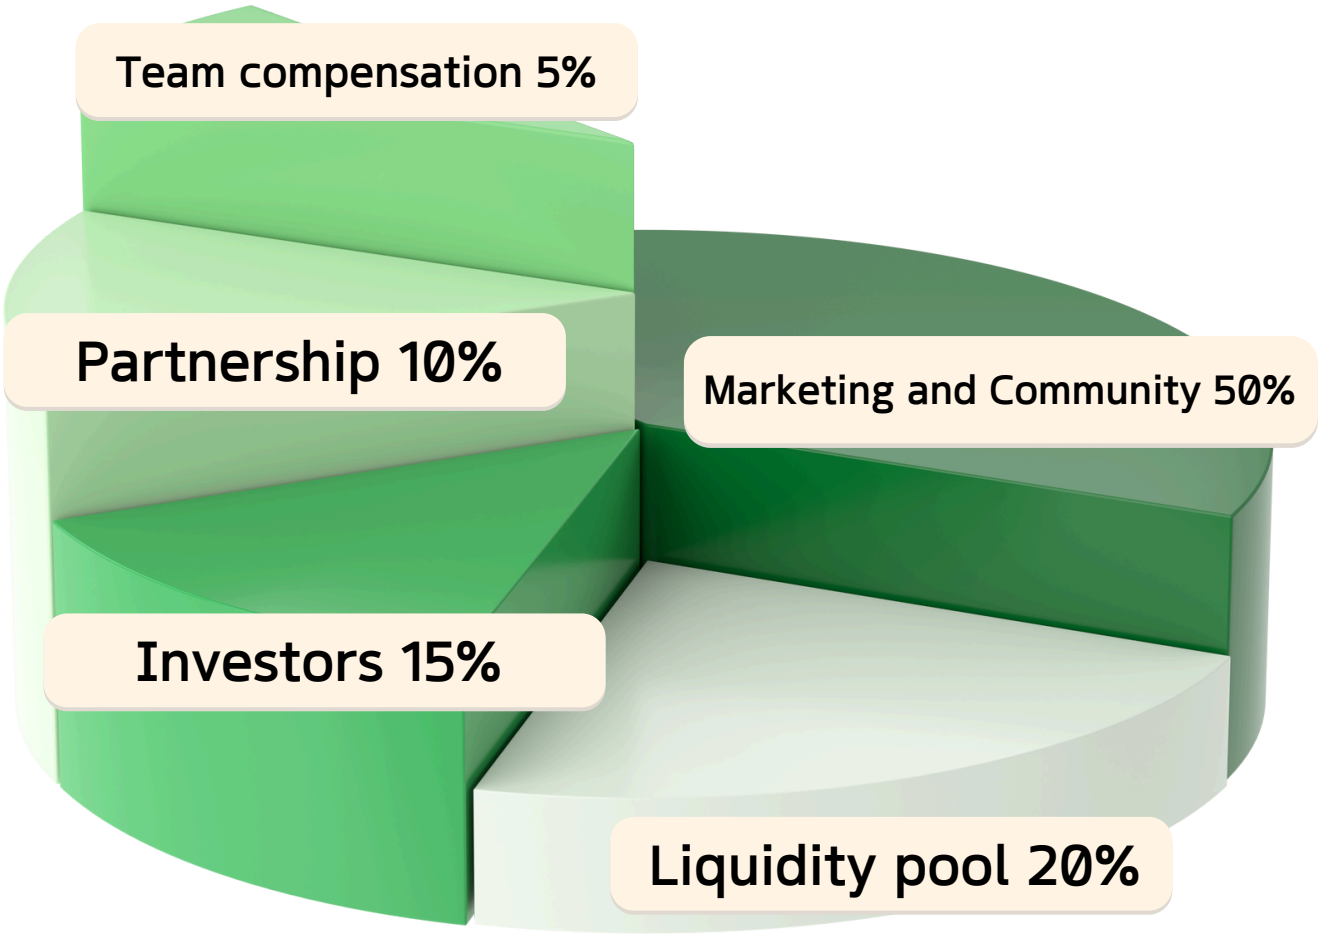
3. price stabilization mechanism
Initial Price Setting: To Stabilize Prices On Initial Exchange Listing Initial pricing.
Liquidity Provider Compensation: Provide additional compensation to users who provide liquidity.

Purpose and Utilities

4. Governance
Decentralized Governance: Token Holders Through Active Governance Models
participation in decision–making.
Voting system: building a system that allows users to vote on important decisions.

5. Feedback and Adjustment
Publishing regular reports: Ensure transparency through regular reports of economic performance and user engagement.
Feedback system: continually coordinating with the system by receiving feedback from users.

Token Distribution



Total supply: 1,000,000,000 tokens

Distribution Percentage

Marketing and Community: 50% (500,000,000 tokens)
Liquidity pool: 20% (200,000,000 token)
Investors: 15% (150,000,000 tokens)
Partnership: 10% (100,000,000 tokens)
Team compensation: 5% (50,000,000 tokens)
